

## Vox Mahala Set-Up Instructions

### Windows

How To: Configure & Use your free Vox Mahala Internet Connection in Windows XP

Check your Operating System

Applicable Operating Systems Microsoft Windows XP Professional Edition

- Microsoft Windows Home Edition
- Windows and Buttons: **Windows XP style**

### Configuration Process

1. To start the Network Connections tool, click **Start**, click **Control Panel**, and click on the **Network Connections icon** in the category list.
2. Click **Create a New Connection** in the left hand menu bar  
This launches the **New Connection wizard** – click **next**
3. Select **Connect to the Internet** – click **next**
4. Select **Set up my connection manually** – click **next**
5. Select **Connect using a dial up modem**

Select the appropriate device

Type Vox Mahala in the open field – click **next**

**Type in "0878079999" - Click Next.**

Please note that when dialling from a Telkom South Africa telephone line calls are charged at R1.07 incl VAT per minute (as of Aug 2007). As such the Vox Mahala dial-up products are best for sporadic and additional use and suited to individuals spending less than 3 hrs on the internet per month. Should you spend more than 3hrs per month online Vox suggests that you try one of our other products which would be more cost effective for more frequent browsing

Connection availability – select which ever option suits you best

6. Type in the following login information:  
Username: **voxmahala**  
Password: **free**  
Confirm password: **free**  
Click **next**
7. on the Completing the Connection Wizard screen we suggest you do select the option to save the shortcut on your desktop for future ease of use – click **Finish**
8. The **Connect to Vox Mahala** screen will pop up – click **Dial**  
**Once you have successfully dialled in you are ready to browse the internet**

## Vox Mahala Set-Up Instructions

### Vista
